CERTIFICATIONS

- IBM Data Analyst Professional Certificate
- CompTIA CySA+ (CS0-003)
- CompTIA Security+ (SY0-701)

EDUCATION

- High School Diploma
Liceo Scientifico (Scientific High School)

SOFT SKILLS

- Analytical thinking
- Attention to detail
- Problem solving
- Communication

LANGUAGES

- Italian: Native
- English: C1 (Advanced)

PROFILE

Junior data analyst with IBM Data Analyst Professional Certificate (Coursera) and hands-on experience in Python, SQL, Pandas, Power BI (DAX), Tableau Public, and development of GenAI applications (LLM, RAG, prompt engineering). Background in cybersecurity and operational security at a major European airport, with strong analytical mindset and attention to detail acquired in high-pressure environments. Motivated to start a professional path as Junior Data Analyst, combining methodological rigor with the ability to turn data into actionable insight.

PROJECTS

NTSB Aviation Safety Analysis - Python · Pandas · Power BI · DAX github.com/Federico-Ordoncelli/ntsb-aviation-safety-analysis

- End-to-end pipeline analyzing 7,438 US aviation accidents (NTSB 2016-2023): Python data cleaning with multi-line CSV handling, feature engineering of operational classification, and interactive Power BI dashboard with DAX measures
- Identified the risk perception bias: 60% of accidents are private general aviation vs 3% scheduled commercial flights, challenging the media-driven narrative
- Geographic visualization with Bing Maps, executive KPIs, and transparent disclosure of dataset limitations (2020-2021 reporting gap)

Customer Churn Analysis - Telco - Python · Pandas · Tableau Public github.com/Federico-Ordoncelli/telco-churn-analysis

- End-to-end pipeline on 7,043 Telco customers: Python data cleaning with detection of hidden non-numeric values and feature engineering, plus interactive dashboard published on Tableau Public
- Identified high-risk segment "Fiber Optic + No Online Security" (49.4% churn vs 26.5% baseline), with quantified MRR at risk (€139k/month)
- Executive storytelling with 4 KPIs, 4 churn driver views, and actionable business recommendations

StudyBuddy - Python · Streamlit · Ollama · ChromaDB · Docker github.com/Federico-Ordoncelli/studybuddy

- End-to-end GenAI application generating structured study materials (summaries, flashcards, glossaries, mind maps, MCQ quizzes) from PDFs, HTML, audio and video, with modular Python architecture and Streamlit UI
- Complete RAG pipeline: adaptive chunking, semantic embedding via nomic-embed-text on Ollama, persistent ChromaDB vector database, top-k retrieval with source citation
- Containerized with Docker Compose multi-service (app + LLM server) with NVIDIA GPU passthrough, robust prompt engineering with structured JSON output and fail-safe parsing

TECHNICAL SKILLS

- Data & Analytics: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, Excel
- Visualization: Power BI (DAX), Tableau Public, IBM Cognos Analytics, Matplotlib, Seaborn
- Database: SQL (JOIN, GROUP BY, subqueries, window functions), SQLite
- Statistics: descriptive analysis, segmentation, correlation
- Data preparation: ETL, data cleaning, feature engineering
- GenAI / LLM: prompt engineering, RAG (retrieval-augmented generation), semantic embedding, vector database (ChromaDB), Ollama, Docker
- Tools: Jupyter Notebook, Google Colab, Git
- Cybersecurity: Wireshark, Nmap, SIEM, log analysis, MITRE ATT&CK
- Operating Systems: Windows, Linux
- Programming: Python, C++ (basic)

WORK EXPERIENCE

ICTS (Rome Fiumicino Airport)

Mar 2023 - Mar 2025

Aviation Security Officer

- Monitoring of security systems in a high-risk, high-throughput operational environment
- Handling of critical situations with rapid decision-making and standardized procedures
- Transferable mindset to data work: alert management, structured reporting, and operational data analysis

OTHER DATA PROJECTS

SQL Analysis - Northwind Database - Python · SQLite · Pandas · Matplotlib

github.com/Federico-Ordonselli/sql-northwind-analysis

- Advanced SQL queries (JOIN, GROUP BY, subqueries, window functions)
- Insight extraction on revenue by category, top customers, and salesperson performance
- Identification of products with critical stock levels through conditional SQL logic

Security Log Analysis - Python · Pandas · Matplotlib · Seaborn

github.com/Federico-Ordonselli/security-log-analysis

- SSH log analysis to identify brute-force attempts and suspicious IPs
- Heatmap of failed access attempts by day/hour and correlation with high-risk IPs
- Structured report with security recommendations

E-commerce Sales Analysis - Python · Pandas · Matplotlib · Seaborn

github.com/Federico-Ordonselli/ecommerce-sales-analysis

- Data cleaning and analysis of a real-world dataset with 500,000+ retail transactions
 - Identified monthly revenue trends, top-selling products, and peak shopping hours
 - Built bar charts and line plots to support data-driven recommendations
-
